professionals
who tested it**

An innovative solution for
the management of infectious risk
via medical bedding

dr.helewa
by **didactic**

In hospital, medical bedding is the cause of **17% of nosocomial infections**¹.

Changing sheet requires:

- Mobilization of the caregiver's time (10 to 15 mins)
- Potentially painful movement for the patient

NewBedding®, multi detachable & disposable fitted sheets:

Contribute to infection control

- Waterproof side prevents liquids from contaminating other layers*
- Laundry step is eliminated

Make caregivers' work easier

- **83% of healthcare professionals** consider that Newbedding makes their work easier**

Improve patient comfort

- The layer's face in contact with the patient is made of bamboo fiber : **32% softer** than traditional sheets*
- For **89% of healthcare professionals** Newbedding reduce potentially painful movements for patients**.

Hospital
